# User DOCUMENTATION

## Task

We have the weather forecast for the next  $N$  days for  $M$  settlements.

Write a program that gives the warmest settlement, which means that it is the settlement that has the longest period in which temperatures are above a given  $K$  temperature

## Runtime environment

An HP PC that can run exe files, 32-bit operating system (e.g. Windows 10).

No mouse needed.

## Usage

### Starting the program

The program can be found in the archived file by the name

`C3Assignment\bin\Release\A.exe`. You can start the program by clicking `c3assignment.exe` file.

## Program Input

Data	Explanation
$N$	The count of days ( $1 \leq N \leq 1000$ )
$M$	The count of settlements ( $1 \leq M \leq 1000$ )
$K$	A temperature limit ( $20 \leq K \leq 50$ )
$Data_{i,j}$	$i^{\text{th}}$ settlement for the $j^{\text{th}}$ day ( $0 \leq Data_{i,j} \leq 50$ )
...	
$Data_{M,N}$	$N^{\text{th}}$ settlement for the $M^{\text{th}}$ day ( $0 \leq Data_{M,N} \leq 50$ )

## **Program output**

The program writes out the index of the settlement which has the longest period in which temperatures are above a given K temperature. If there is more than one solution, the output should be the smallest index. If there is no solution the output should be -1.

## **Sample input and output**

### **Inputs:**

```
N: 3
M: 3
K: 30
Settlement: 1
    1. Day's Temperature: 20
    2. Day's Temperature: 22
    3. Day's Temperature: 31
Settlement: 2
    1. Day's Temperature: 31
    2. Day's Temperature: 31
    3. Day's Temperature: 31
Settlement: 3
    1. Day's Temperature: 29
    2. Day's Temperature: 31
    3. Day's Temperature: 31
```

### **Outputs:**

```
Outputs:
The index of the settlement which has the longest period: 2
```

## **Possible errors**

The input should be given according to the sample. If the Count of days and count of the settlements are not an integer number and the not in between 1 and 1000, it will cause an error. If the temperature limit is not an integer number and between 20 and 50, it will also cause an error. The expected temperature for the  $i^{\text{th}}$  settlement and for the  $j^{\text{th}}$  day are not integer numbers and not in between 0 and 50, it will cause an error. In the case of an error, the program displays an error message and asks for the repetition of the input.

## **Sample of running in the case of invalid data:**

```
N: Three
Error! give me a number between 1 and 1000: -1
Error! give me a number between 1 and 1000: 10001
Error! give me a number between 1 and 1000: 3
M: Two
Error! give me a number between 1 and 1000: -1
Error! give me a number between 1 and 1000: 10001
Error! give me a number between 1 and 1000: 2
K: Twenty one
Error! give me a number between 20 and 50: 19
Error! give me a number between 20 and 50: 51
Error! give me a number between 20 and 50: 21
Settlement: 1
```

```
1. Day's Temperature: Twenty
Error! give me a number between 0 and 50: -1
Error! give me a number between 0 and 50: 51
Error! give me a number between 0 and 50: 21
2. Day's Temperature
```

# Developer documentation

## Task

We have the weather forecast for the next  $N$  days for  $M$  settlements.

Write a program that gives the warmest settlement, which means that it is the settlement that has the longest period in which temperatures are above a given  $K$  temperature

## Specification

Inputs:

$N \in \mathbb{N}, M \in \mathbb{N}, K \in \mathbb{N}$

Data  
 $1..N, 1..M \in \mathbb{N}^{N \times M}$

Outputs:

index  $\in \mathbb{N}$

Precondition:

$1 \leq N \leq 1000 \wedge 1 \leq M \leq 1000 \wedge 20 \leq K \leq 50$

$\wedge \forall i (1 \leq i \leq N) : \forall j (1 \leq j \leq M) : 0 \leq \text{Data}_{i,j} \leq 50$

Post conditions

$\forall i (1 \leq i \leq N) : \exists m \mid m \in (1..M) \text{ and}$

$\forall j (1 \leq j \leq m) : \text{Data}_{i,j} > K \text{ and}$

$\text{Data}_{i,m+1} \leq K$

$$\text{indent} = \sum_{j=1}^m \text{Data}_{i,j} > K$$

$\text{indent} \leq \text{MaxCount} \leq M \text{ and } 1 \leq \text{index} \leq N$

## **Developer environment**

HP PC, an operating system capable of running exe files (e.g. Windows 10).  
mingw32-g++.exe C++ compiler (v5.1), Code :: Blocks (v17.12) developer tool.

## Source code

All the sources can be found in the `c3assignment` folder (after extraction). The folder structure used for development:

File Name	Explanation
C3Assignment\bin\Release\a.exe.	Executable File
C3Assignment\bin\Release\main.o	Object File/Semi Compiled
C3Assignment\main.cpp	C++ source Code
C3Assignment\TestCase1.txt	Input File <sub>1</sub>
C3Assignment\TestCase2.txt	Input File <sub>2</sub>
C3Assignment\TestCase3.txt	Input File <sub>3</sub>
C3Assignment\TestCase4.txt	Input File <sub>4</sub>
C3Assignment\TestCase5.txt	Input File <sub>5</sub>
C3Assignment\TestCase6.txt	Input File <sub>6</sub>
C3Assignment\TestCase7.txt	Input File <sub>7</sub>
C3Assignment\TestCase8.txt	Input File <sub>8</sub>
C3Assignment\Documentation	Documentation (This file)

## **Solution**

### **Program parameters**

#### **Constants:**

nMax: **Integer** (1000)  
nMin: **Integer** (1)  
Tmin: **Integer** (0)  
Kmin: **Integer** (20)  
Kmax: **Integer** (50)

#### **Variables**

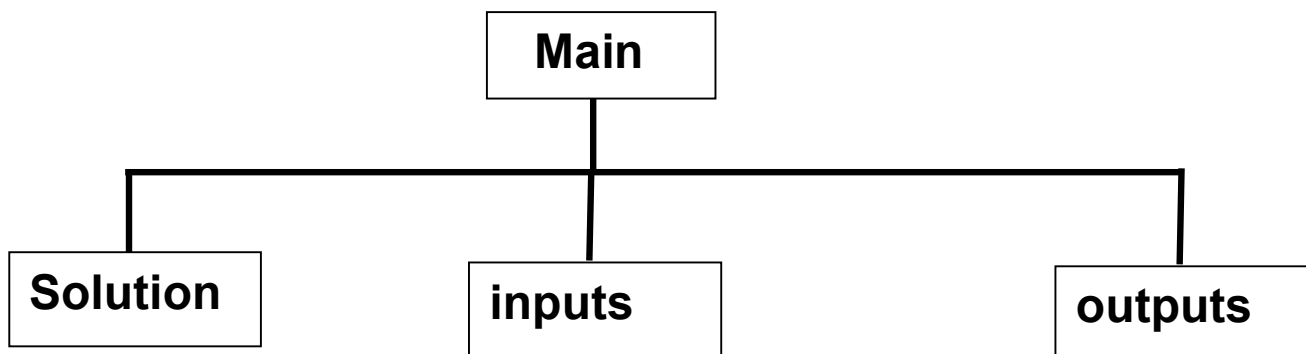

N : **Integer**  
M : **Integer**  
K : **Integer**  
Data : **2D Array** (1..N+1,1..M+1 : **Integer**)  
N : **Integer**  
Index : **Integer**  
indCnt : **Integer**  
  
MaxCnt : **Integer**

## The structure of the program

The modules used by the program, and their locations:

`main.cpp` the program, in the source folder  
`iostream` keyboard and console management, part of the C++ system

## Structure of FUNCTIONS

## Main Program

```
inputs(N,M,K,Data[][])
```

```
solution(N,M,K,indCnt, MaxCount, index, Data[][])
```

```
Outputs(index)
```

## Sub-Programs:

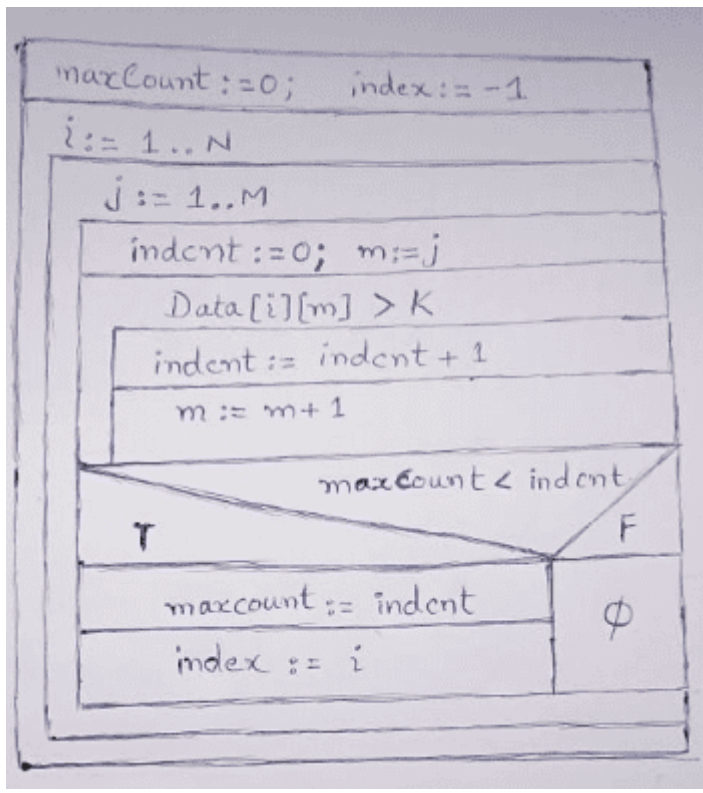

### inputs:

```
Intputs(N,M,K)
```

```
In: N,M,K,Data[1..N][1..M]
```

### Solution:

`solution(N,M,K,indCnt, MaxCount, index, Data[1][1])`

### outputs:

`Outputs(index)`

Out: index

## The code

The content of the main.cpp file:

```
/* Created by: Hussain Izhar; Neptun Code: L9EIKJ E-mail:
izhar1022@gmail.com; Task: „Big Project” – Longest period settlement*/
#include <iostream>

using namespace std;

}

```

# TESTING:

**Case 01:** When there exists a settlement with a longest period

```
PS C:\Users\intag pc\Desktop\Git Hub\ProgFundamentals\C 3 Assignment> .\a.exe
N: 3
M: 3
K: 31
Row: 1
  1. Temperature : 32
  2. Temperature : 2
  3. Temperature : 2
Row: 2
  1. Temperature : 32
  2. Temperature : 32
  3. Temperature : 32
Row: 3
  1. Temperature : 2
  2. Temperature : 2
  3. Temperature : 32

OutPuts
The index of the settlement which has the longest period: 2
```

**Case 02:** When there exists no settlement with a longest period

```
PS C:\Users\intag pc\Desktop\Git Hub\ProgFundamentals\C 3 Assignment> .\a.exe
N: 4
M: 4
K: 30
1. Settlement:
  1. Day's Temperature : 1
  2. Day's Temperature : 3
  3. Day's Temperature : 1
  4. Day's Temperature : 6
2. Settlement:
  1. Day's Temperature : 1
  2. Day's Temperature : 4
  3. Day's Temperature : 4
  4. Day's Temperature : 23
3. Settlement:
  1. Day's Temperature : 23
  2. Day's Temperature : 23
  3. Day's Temperature : 1
  4. Day's Temperature : 17
4. Settlement:
  1. Day's Temperature : 14
  2. Day's Temperature : 13
  3. Day's Temperature : 23
  4. Day's Temperature : 2

OutPuts
The index of the settlement which has the longest period: -1
```

**Case 03:** When there exists two settlements settlement with a longest period

```
PS C:\Users\intag pc\Desktop\Git Hub\ProgFundamentals\C 3 Assignment> .\a.exe
N: 4
M: 4
K: 31
1. Settlement:
  1. Day's Temperature : 31
  2. Day's Temperature : 2
  3. Day's Temperature : 2
  4. Day's Temperature : 31
2. Settlement:
  1. Day's Temperature : 32
  2. Day's Temperature : 32
  3. Day's Temperature : 32
  4. Day's Temperature : 1
3. Settlement:
  1. Day's Temperature : 32
  2. Day's Temperature : 32
  3. Day's Temperature : 32
  4. Day's Temperature : 1
4. Settlement:
  1. Day's Temperature : 32
  2. Day's Temperature : 32
  3. Day's Temperature : 1
  4. Day's Temperature : 1

OutPuts
The index of the settlement which has the longest period: 2
```

**Case 04:** In case the user gives string instead of numbers

```
PS C:\Users\intag pc\Desktop\Git Hub\ProgFundamentals\C 3 Assignment> .\a.exe
N: one
Error! give me a number between 1 and 1000 : 1
M: two
Error! give me a number between 1 and 1000 : 2
K: thirty
Error! give me a number between 20 and 50 : 30
1. Settlement:
  1. Day's Temperature : twenty one
  Error! give me a number between 0 and 50 : 21
  2. Day's Temperature : ansdjlafkjsdl
  Error! give me a number between 0 and 50 : 21

OutPuts
The index of the settlement which has the longest period: -1
```

**Case 05:** In case the user gives numbers out of range (specified in pre-condition)

```
PS C:\Users\intag pc\Desktop\Git Hub\ProgFundamentals\C 3 Assignment>
N: -1
Error! give me a number between 1 and 1000 : 10001
Error! give me a number between 1 and 1000 : 2
M: -1
Error! give me a number between 1 and 1000 : 10001
Error! give me a number between 1 and 1000 : 2
K: 19
Error! give me a number between 20 and 50 : 51
Error! give me a number between 20 and 50 : 49
1. Settlement:
  1. Day's Temperature : -1
    Error! give me a number between 0 and 50 : 51
    Error! give me a number between 0 and 50 : 49
  2. Day's Temperature : -1
    Error! give me a number between 0 and 50 : 51
    Error! give me a number between 0 and 50 : 49
2. Settlement:
  1. Day's Temperature : -1
    Error! give me a number between 0 and 50 : 51
    Error! give me a number between 0 and 50 : 1
  2. Day's Temperature : -1
    Error! give me a number between 0 and 50 : 51
    Error! give me a number between 0 and 50 : 1

OutPuts
The index of the settlement which has the longest period: -1
```

**Case 06:** Random Case: every entry = 0

```
PS C:\Users\intag pc\Desktop\Git Hub\ProgFundamentals\C 3 Assignment> .\a.exe
N: 3
M: 3
K: 30
1. Settlement:
  1. Day's Temperature : 0
  2. Day's Temperature : 0
  3. Day's Temperature : 0
2. Settlement:
  1. Day's Temperature : 0
  2. Day's Temperature : 0
  3. Day's Temperature : 0
3. Settlement:
  1. Day's Temperature : 0
  2. Day's Temperature : 0
  3. Day's Temperature : 0

OutPuts
The index of the settlement which has the longest period: -1
```

## **Further Development:**

1. Reading from a file
2. Detection of wrong input file
3. Writing out the Location and ID of the errored file
4. Capability of running multiple times one after another.
